

Healthy Digestion

An easy-read booklet

Common digestive problems and how to treat them

Digestive problems such as constipation, diarrhoea, heartburn and bloating are very common.

These problems are usually treatable by changing what you eat and medicines.

Most digestive problems are to do with lifestyle, the foods you eat, or stress.

Taking steps to change your lifestyle can help, and often stop many of these problems.

Common digestive problems and how to treat them

Some medicines that your doctor may have prescribed for you can lead to side effects that may upset your tummy.

These medicines can cause indigestion, diarrhoea or constipation.

Always tell your doctor if your prescribed medicines are upsetting your tummy.

Common digestive problems

Digestive problems are usually harmless and often settle down by themselves, but sometimes they do not go away and can be a sign of serious illness.

If you have taken medicine and the problem has not gone away in 2 weeks, go and see your doctor.

If you have any of the following, you should see a doctor straight away.

Losing weight

Losing weight quickly

A sudden change in how often you go to the toilet

Bleeding from your bottom

Difficulty swallowing

Unable to go to the toilet

Constant Diarrhoea

Reflux (a burning feeling in your throat after eating)

A constant pain in your stomach that doesn't go away

Good ways to help your digestion

It's a good idea to try to eat more fibre, as most people don't get enough. A diet with lots of fibre can help digestion and prevent constipation.

Eating too much of the wrong food too often could cause digestion problems. Here's a tummy-friendly diet to aim for.

To stay healthy, you need fibre from lots of different foods, such as:

Brown bread and brown rice

Fruit and vegetables

Cereals and oats

Beans

Good ways to help your digestion

Tip 1. Drink plenty of fluids

It's important to keep drinking, especially water. It may be a good idea to buy a reusable water bottle and take it with you when you are out and about.

A good way to make sure you're getting enough fluids is to drink a glass of water with every meal.

Tip 2. Cut down on fat

Fatty foods, such as chips, burgers and fried foods are harder to digest and can cause stomach pain and heartburn.

Grill ✓

Try to eat more less fatty meat and fish and grill rather than fry foods.

Good ways to help your digestion

Tip 3. Go easy on spice to avoid tummy troubles

Many people love spicy food and it doesn't cause digestive problems. Others find their tummy is upset when they have spicy food.

Onion and garlic can cause digestive problems for some people.

If spicy foods give you heartburn, stomach pain or diarrhoea, try to eat them less often. If you already have a problem like heartburn or an irritable bowel, avoid them completely.

Tip 4. Choose the right drinks to ease digestion

Coffee, colas, tea and some fizzy drinks have caffeine in them, which makes more acid in your stomach. This can cause heartburn.

Good ways to help your digestion

Fizzy drinks in general tend to bloat the tummy, which can also cause to heartburn.

To make digestive problems less likely, choose drinks that aren't fizzy and don't contain caffeine, such as herbal teas, milk and plain water.

Tip 5. Using Probiotics

Probiotics are a medicine you can take to help with digestion. They add more good bacteria to your tummy.

They take a while to work. You will need to take them every day for at least 4 weeks to see if they help you.

Good ways to help your digestion

Try to stay away from foods and drinks that cause you digestive problems.

One way to work out which foods cause your problems is to keep a food diary.

The Bristol Stool Chart

Adapted from the Bristol Stool Scale (Heaton et al 1995)

Type 1		Separate hard lumps, like nuts (hard to pass)
Type 2		Sausage-shaped
Type 3		Like a sausage with cracks on its surface
Type 4		Like a sausage, smooth and shiny
Type 5		Soft blobs with flat edges (passed easily)
Type 6		Fluffy pieces with ragged edges, mushy
Type 7		Watery, no solid pieces, ENTIRELY LIQUID

A good way to keep track of your health is to keep a bowel chart. These can either be done on paper or using an app on your phone or tablet.

'Poop Tracker - Toilet Log' is a useful and simple App to try. It is free and available on the App Store and Google Play.
